PURPOSE: To obtain a polishing composition having not only a polishing ability but also excellent characteristics as a builder or adsorbent and useful especially for a toothpaste by using a porous coral powder as a constituent.

CONSTITUTION: A polishing composition containing a porous coral powder having a particle diameter of about 0.1- 50µm and a pore diameter of about 0.01-50µm. This composition has not only a polishing ability but also excellent characteristics as a builder or adsorbent and is useful especially for a toothpaste. It can remove the deposit adhered to the teeth without impairing them; it enables other additives, such as spices and medicinal components, to effectively reveal their actions; further it can remove the foul-smelling components in the mouth by adsorption.

Legal Status: There is no Legal Status information available for this patent
